

CLAIM AMENDMENTS

1 - 17. (canceled)

18. (currently amended) In a motor vehicle, the combination comprising:

a wall formed with a recess;

a hand tool adapted to fit with the recess, formed with a throughgoing hole and of a pair of similarly shaped secured-together elements, and including a scraper blade fastened between and projecting at an end from between the elements, the opening being generally circular, at least as large as a standard beverage can, and having elastically deformable lips adapted to grip a standard beverage can fitted in the hole; and

latch means for releasably securing the tool in the recess, whereby for use the hand tool, which can form part of a cup holder, can be grasped through the hole and freed from the recess.

19. (previously presented) The combination defined in claim 18 wherein the hand tool is an ice scraper.

20. (previously presented) The combination defined in claim 18 wherein the vehicle has a center console forming the wall.

1 21. (previously presented) The combination defined in
2 claim 18 wherein the latch means includes a magnet.

22 - 24. (canceled)

1 25. (currently amended) The combination defined in
2 claim [[24]] 25 wherein the hole is at least partially of larger
3 diameter than the standard beverage can.

1 26. (previously presented) The combination defined in
2 claim 18 wherein the tool is provided with a hard edge suitable for
3 use as a scraper.

1 27. (previously presented) The combination defined in
2 claim 18 wherein the tool is elongated and has long sides formed
3 with cutouts facilitating gripping of the tool.

1 28. (previously presented) The combination defined in
2 claim 18 wherein the tool is formed with a seat shaped to
3 releasably retain a coin.

29 and 30. (canceled)

1 31. (previously presented) The combination defined in
2 claim 18, further comprising
3 a light source fixed on the tool; and
4 a battery between the elements connectable to the source.
